

UNISYS

April 5, 2005

To Whom It May Concern:

Unisys Corporation signed a U.S. Reseller Agreement with ICI Networks in August 2004, for the rights to resell the MIPTAC™ and MIPTAC Lite™ products. Unisys employs the ICI products within the "CommHub" solution, a comprehensive wireless offering. The CommHub solution is part of Unisys push to benefit from the wireless and mobility growth sectors in the marketplace.

Unisys considers the ICI relationship strategic to the success of the CommHub program, due to the sourcing of the MIPTAC™ and MIPTAC Lite™ product lines. These are crucial components that when bundled with Unisys overall wireless mobile solution provides a competitive advantage in the marketplace.

There is a demand for local, state, and federal agencies to communicate and inter-operate as required by the Department of Homeland Security. Unisys has launched the CommHub to meet these requirements of communications interoperability in the public sector. ICI Networks provides Unisys with key components and unique technologies allowing us to address these market needs with a distinct competitive advantage. The CommHub program team at Unisys looks forward to a long, prosperous relationship with ICI Networks.

Thank You,
